Squash

Squash! Squash grow above the ground on vines and are in the same family as pumpkins. The most popular types of squash you see in the grocery stores are named after their growing seasons, summer and winter. The entire squash is edible: the outside skin, inside flesh and the seeds.

Vitamin A: One of the main nutritional benefits of squash is its serving of vitamin A. Your eyes use vitamin A to see at night and recognize colors.

Growing Regions: East Texas, Rio Grande Valley and Winter Garden

Papaya

Even though papayas look like melons they are actually classified as berries and grow on giant herb type plants, not trees. These plants can reach up to 30 feet in height if the trunk is straight and healthy. In addition to the sweet orange centers, the seeds of a papaya can be eaten and have a spicy, peppery taste.

Vitamin C: Papaya's are great source of vitamin C. Your body needs vitamin C to grow and repair tissues in your skin and muscles

Growing Region: Rio Grande Valley
